TECHNICAL SKILLS

PROGRAMMING
Python, C++, MATLAB, Simulink

CONTROL & ESTIMATION
Classical & state-space control, robust MPC, Kalman filtering (EKF), reinforcement learning

MACHINE LEARNING
PyTorch, scikit-learn, XGBoost, pandas, NumPy

CAD / CAE
Siemens NX, AutoCAD, Blender

SOFTWARE & DEVOPS
FastAPI, PostgreSQL, SQLAlchemy, Docker, Git, GitHub Actions, Linux

DOCUMENTATION
LaTeX, technical reporting, MS Office

LANGUAGES

Polish	Native
English	Bilingual · C2 (CPE)
French	B2
German	Conversational (DSD I)

STRENGTHS

Clear communicator in several languages

Calm and methodical under pressure

Fast learner, team-oriented

LEON GÓRECKI

Aerospace Engineer · MSc Student in Control & Robotics

PROFILE

Aerospace engineer (BEng, Warsaw University of Technology) pursuing the CORO-IMARO Master's in Control and Robotics at Centrale Nantes. I build control systems, simulation pipelines and machine-learning tools, from robust MPC to an ML system in daily industrial use. Seeking internships in aerospace, control and robotics in France or across the EU.

EDUCATION

MSc Control and Robotics (CORO-IMARO) — 2026 – 2028
École Centrale de Nantes · Nantes, France

Erasmus+ Exchange · Aerospace Engineering — Sep 2024 – Jan 2025
Universitat Politècnica de Catalunya (UPC), EETAC · Barcelona, Spain

BEng Aerospace Engineering — 2022 – 2025
Warsaw University of Technology (Politechnika Warszawska), MEiL · Warsaw, Poland

Specialisation: Automation & Aircraft Systems. Thesis: *Reinforcement Learning (PPO) vs Robust MPC* for a simulated mobile robot, with and without GNSS.

PROFESSIONAL EXPERIENCE

Software Developer · CAD Designer — 2025 – present
Miltom sp. z o.o. · Industrial tank manufacturer · Poland

- **Software (2026 – present):** built MILTOM-Bot, a tender-monitoring system in production since July 2026. It reads the national procurement bulletin hourly and ranks tenders with a classifier retrained nightly on sales-team feedback (Python, FastAPI, PostgreSQL, Docker).
- **CAD (2025 – present):** AutoCAD drafting and technical documentation for industrial tank projects; contributed to a ~60% rise in offer-to-contract conversion.

Flight Instructor — 2025
NewtonRoom × Boeing · Warsaw, Poland

Taught navigation basics and Cessna 172 simulator flying to high-school students.

Physics & Mathematics Tutor — 2015 – present
Independent · Warsaw, Poland

High-school level tutoring and Polish *matura* exam preparation.

SELECTED PROJECTS

- **Evans:** PySide6 desktop app for classical and state-space control. Bode, Nyquist, root-locus and step analysis, a 50-block diagram simulator with linearize(), and 60 MATLAB-style commands. 817 pytest tests against hand-computed values.
- **MostMobileMouse (in progress):** a phone face-down on the desk works as a mouse. Lucas-Kanade optical flow on the ceiling gives the motion, with gyro de-rotation. The accelerometer sets the scale and detects taps and lifts. Kotlin recorder (60 fps, 500 Hz IMU), Python engine.
- **F1 Race Predictor:** an XGBoost regressor with 35 features (grid, practice pace, Elo rating, weather) predicts finishing positions. 10,000 Plackett-Luce samples give win and podium probabilities. Leave-one-season-out validation on data from 2014 (FastF1, Streamlit).
